

## Science Vision Map

### Year 3 – Rocks

#### **Crucial Knowledge**

- A rock is a hard material made by the Earth.
- Beneath all ground is rock.
- There are three main types of rocks.
- Some rocks allow water to pass through but some do not.
- A fossil is a left-over part of a plant or animal trapped and protected in the Earth's crust (rock).
- Fossils tell us lots of information about the history of life on Earth.
- Soil is made from rock, minerals and organic matter (dead plants and animals).
- Soil has air trapped in it.

#### **Intent**

- Recap – Use of everyday materials (Year 2)
- Compare and group together rocks by the way they look and feel
- Types of rocks and how rocks are used
- Compare and group rocks by their type and function
- Forming of fossils
- Soil
