

Science Vision Map

Year 2 – Living Things and their Habitats

Crucial Knowledge

- Living things can be plants or animals.
- A living thing is something that breathes and grows.
- Dead is when something used to breathe and grow but no longer does.
- A habitat is a home that gives food and shelter.
(Example, the habitat of a blackbird is a tree and the space around it).
- Habitats are different because animals and plants are different.
- A food chain is how plants and animals get their energy.
- Animals get their energy from food. Plants get their energy from light (sun).

Intent

- Recap Y1: Animals including Humans.
- Differences between living, dead and things that have never been alive.
- The use of habitats (homes).
- Finding out about different habitats (homes) depending on where they are.
- Naming different plants and animals and their habitats.
- Simple food chains.
